TEAM MANAGEMENT

Samir Saadi

Portfolio Manager

MANAGER'S COMMENT

The month of October was marked by a new surge in energy prices, against a backdrop of persistent geopolitical tensions in the Middle East. Brent crude rose by nearly 14%, while natural gas returned to its highest levels since the end of 2022. This dynamic led to an acceleration in headline inflation in both the eurozone and the United States, without, at this stage, causing a comparable increase in core components. Economic activity remained generally resilient, particularly in the United States, even though the deterioration of the US labor market and the slowdown in European business surveys sent more mixed signals.

In this context, the Fed, the ECB, and the Bank of Japan kept their key interest rates unchanged, while maintaining cautious communication in the face of inflationary risks. Bond markets benefited from this monetary pause and a flight to safe-haven assets, resulting in a significant decline in sovereign yields. Conversely, equity markets were shaken at the end of the month by disappointing earnings reports from several major technology companies, which reignited questions about the profitability of massive investments in artificial intelligence. Technology stocks, semiconductors, and emerging markets thus underperformed, while European equities and sectors less exposed to the AI theme proved more resilient.

In light of this environment, we maintain a slightly cautious bias on equities. The most concentrated exposures to large US technology stocks, the Nasdaq, and semiconductors have been reduced, as well as certain thematic and emerging market positions. These adjustments aim to limit the sensitivity of allocations to segments with the highest valuation levels and earnings expectations. At the same time, we are favoring broader indices to improve diversification and reduce concentration risk.
From a sector perspective, we are strengthening our preference for healthcare and energy. Healthcare offers more defensive characteristics, better earnings visibility, and relatively limited sensitivity to the economic cycle. Energy, for its part, benefits from rising hydrocarbon prices and serves as a partial hedge against persistent geopolitical and inflationary tensions. Exposure to emerging markets remains more measured, given their sensitivity to the technology sector, the ongoing weakness of Chinese domestic demand, and a still restrictive rate environment.

In bond markets, we favor a contained duration, mainly in the five- to seven-year maturities. This positioning allows us to benefit from carry and a potential further easing of yields, while limiting exposure to longer maturities, which are more vulnerable to a renewed rise in inflation expectations. Government bonds also continue to play an important role in diversification and protection in the event of renewed risk aversion in equity markets.
Within credit, the euro investment grade segment remains favored due to the quality of issuers and an always attractive risk-return profile. US high yield also offers an interesting source of carry, but only within a rigorous selection framework, given the level of financing rates and the risks of dispersion among issuers. Finally, emerging market debt in local currencies can provide additional diversification, provided a selective approach is maintained regarding currency, inflation, and monetary policy risks specific to each country.

% of the portfolio with an ESG rating[2]	97.63%

[2]Outstanding securities in terms of ESG criteria excluding cash assets.

Definitions and sources

Responsible Investment (RI)

The SRI expresses sustainable development objectives in investment decisions by adding Environmental, Social and Governance (ESG) criteria in addition to the traditional financial criteria.

SRI thus aims to balance economic performance and social and environmental impact by financing companies and public entities which contribute to sustainable development whatever their business sector. By influencing the governance and behaviour of stakeholders, SRI promotes a responsible economy.

ESG criteria

Extra-financial criteria are used to assess the Environmental, Social and Governance practices of companies, states or local authorities:

o “E” for Environment: energy consumption and greenhouse gas emissions, water and waste management, etc.
o “S” for Social/Society: human rights, health and safety, etc.
o “G” for Governance: independence of board of directors, respect of shareholders’ rights, etc.

Amundi Group' ratings range issuers from A to G, with A being the highest rating and G the lowest.

AVERAGE ESG RATING (source : Amundi)

Environmental, Social and Governance rating. Information on sustainability-related aspects can be found at https://about.amundi.com/legal-documentation

ESG Investment Universe: 100% INDEX AMUNDI ESG RATING D

Investment Portfolio Score: 0.64

ESG Investment Universe Score[1]: 0.00

ESG Coverage (source: Amundi) *

	Portfolio	ESG Investment Universe
Percentage with an Amundi ESG rating [2]	97.61%	100.00%
Percentage that can have an ESG rating [3]	88.96%	100.00%

* Securities that can be rated on ESG criteria. The total may be different from 100% to reflect the real exposure of the portfolio (cash included).

ESG Terminology

ESG criteria

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:
"E" for Environment (energy and gas consumption levels, water and waste management, etc.).
"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).
"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.)

ESG Rating

The issuer's ESG rating: each issuer is assessed on the basis of ESG criteria and obtains a quantitative score, the scale of which is based on the sector average. The score is translated into a rating on a scale from A (highest rating) to G (lowest rating). The Amundi methodology provides for a comprehensive, standardised and systematic analysis of issuers across all investment regions and asset classes (equities, bonds, etc.).
ESG rating of the investment universe and the portfolio: the portfolio and the investment universe are given an ESG score and an ESG rating (from A to G). The ESG score corresponds to the weighted average of the issuers' scores, calculated according to their relative weighting in the investment universe or in the portfolio, excluding liquid assets and non-rated issuers.

Amundi ESG Mainstreaming

In addition to complying with Amundi Responsible Investment Policy[4], Amundi ESG Mainstreaming portfolios have an ESG performance objective that aims to achieve a portfolio ESG score above the ESG score of their ESG Investment universe.

[1] The investment universe reference is defined by either the fund's reference indicator or an index representative of the ESG-related investable universe.
[2] Percentage of securities with an Amundi ESG rating out of the total portfolio (measured in weight) that can be related.
[3] Percentage of securities for which an ESG rating methodology is applicable out of total portfolio (measured in weight).
[4] The updated document is available at https://www.amundi.com/int/ESG.

Sustainability Level (source : Morningstar)

The sustainability level is a rating produced by Morningstar that aims to independently measure the level of responsibility of a fund based on the values in the portfolio. The rating ranges from very low (1 Globe) to very high (5 Globes).
