Lower Risk — Higher Risk

⚠ The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years.
The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

INVESTMENT STRATEGY *(Source: Amundi Group)*

The fund invests in global equities and aims to deliver long-term returns in excess of the MSCI World All Countries index (minimum 5 years). The final portfolio is constructed from around 100 stocks across all countries, sectors and market capitalisations. The investment process involves adapting the stock picking approach to the identified market regime. New investment process since December 2013.

ANALYSIS OF THE NET PERFORMANCE *(Source: Fund Admin)*

CHANGE IN NET ASSET VALUE BASE 100 *(Source: Fund Admin)*

A : Simulation based on the performance from December 23, 2013 to October 10, 2018 of CPR Global Equity All Regime - Part I French Fund absorbed by CPR Invest - GEAR World - I- Acc on October 11, 2018.
B : Performance of CPR Invest - GEAR World - I - Acc since its launch date.

MANAGER'S COMMENT

Key highlights of the month
October 2026 was marked by a strong rotation out of AI-related growth stocks and into more defensive, profitable assets that are less exposed to valuation risk. The Nasdaq-100 lost 6.7%, while the equal-weighted S&P 500 rose by about 5%, signaling a clear broadening of the market. Earnings releases from Alphabet, Microsoft, and Intel crystallized doubts about the sustainability of the AI investment boom: Alphabet saw a sharp correction after disappointing results in traditional search and a negative free cash flow, Microsoft raised its expected capex, and Intel suffered from disappointing guidance. At the same time, geopolitical tensions in the Middle East, the rise and subsequent volatility in oil prices, and a more hawkish Fed than anticipated maintained a cautious climate, even though the 10-year Treasury yield eventually fell back to around 4.9% at the end of the month.
The month clearly favored Value and Quality styles. The best-performing factors were those related to cash flow and valuation multiples, confirming investors' renewed focus on companies capable of generating tangible cash. Conversely, growth and momentum factors suffered, reflecting the breakdown of outperformance among the most expensive and consensus AI stocks. Quality factors also held up well in an environment of heightened credit tensions.

Review of the main positions of the month
Over the month, the fund delivered a performance above that of the benchmark index.
We note a negative sector effect, despite good contributions from Communication Services and Health Care, but negative in the Technology and Energy sectors.
The country effect was positive, notably with good contributions from Emerging Markets and North America, but negative in Asia and Europe.
We also observed a negative effect from our aggressive factor, with a contribution of around -1.56%, while at the same time noting a positive effect from our defensive factor, with a contribution of 1.35%.
The market capitalization size effect was negligible.
During the review period, we were overweight on the blend factor and underweight on the volatility factor.
At the stock level, we saw very strong contributors to performance such as Mastercard Incorporated Class A (OW, 17.9%), Targa Resources Corp. (OW, 19%), Intel (UW, -44.3%), Autodesk (OW, 21.5%).
Conversely, the following stocks penalized us: Comfort Systems USA (OW, -24.2%), China Gold International Resources Corp Ltd (OW, -19.9%), KLA (OW, -17.6%), ASML Holding N.V. (OW, -11.4%).
There were no transactions during the month.

Outlook for the following month
Equity markets remain supported by a still resilient late-cycle environment, but one that has become more selective. Global growth is still driven by investment, particularly by the AI-related cycle, while inflation remains persistent and financial conditions stay restrictive. Markets are now pricing in a scenario of gradual slowdown, without a sharp break, rather than a recession. In this context, rising energy costs, margin pressure, refinancing needs, and more discriminating liquidity are becoming key variables for equities. Valuations may still be high, but only if earnings and cash generation continue to deliver.
The US region retains the most robust profile among major developed markets. Growth remains stronger, corporate profitability more resilient, and cash flows still favorable. This continues to support the segments most exposed to the investment cycle, particularly AI-related infrastructure, semiconductors, technology hardware, industrials, and certain utilities. However, the market is becoming more demanding regarding companies' ability to monetize AI, especially for the most capital-intensive players. AI remains an earnings driver, but the hierarchy among winners is becoming more refined: investors now favor companies able to finance their investments through internal cash flow, rather than those whose valuation is mainly based on future growth expectations.
Overall, the bias remains favorable to US equities, but with a strong requirement for selection, quality, and visibility.

AVERAGE ESG RATING (source : Amundi)

Environmental, Social and Governance rating. Information on sustainability-related aspects can be found at https://about.amundi.com/legal-documentation

ESG Investment Universe: 100% MSCI ACWI

Investment Portfolio Score: 0.11

ESG Investment Universe Score[1]: -0.14

ESG Coverage (source: Amundi) *

	Portfolio	ESG Investment Universe
Percentage with an Amundi ESG rating [2]	100.00%	99.90%
Percentage that can have an ESG rating [3]	98.70%	100.00%

* Securities that can be rated on ESG criteria. The total may be different from 100% to reflect the real exposure of the portfolio (cash included).

ESG Terminology

ESG criteria

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:
"E" for Environment (energy and gas consumption levels, water and waste management, etc.).
"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).
"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.)

ESG Rating

The issuer's ESG rating: each issuer is assessed on the basis of ESG criteria and obtains a quantitative score, the scale of which is based on the sector average. The score is translated into a rating on a scale from A (highest rating) to G (lowest rating). The Amundi methodology provides for a comprehensive, standardised and systematic analysis of issuers across all investment regions and asset classes (equities, bonds, etc.).
ESG rating of the investment universe and the portfolio: the portfolio and the investment universe are given an ESG score and an ESG rating (from A to G). The ESG score corresponds to the weighted average of the issuers' scores, calculated according to their relative weighting in the investment universe or in the portfolio, excluding liquid assets and non-rated issuers.

Amundi ESG Mainstreaming

In addition to complying with Amundi Responsible Investment Policy[4], Amundi ESG Mainstreaming portfolios have an ESG performance objective that aims to achieve a portfolio ESG score above the ESG score of their ESG Investment universe.

[1] The investment universe reference is defined by either the fund's reference indicator or an index representative of the ESG-related investable universe.
[2] Percentage of securities with an Amundi ESG rating out of the total portfolio (measured in weight) that can be related.
[3] Percentage of securities for which an ESG rating methodology is applicable out of total portfolio (measured in weight).
[4] The updated document is available at https://www.amundi.com/int/ESG.

Sustainability Level (source : Morningstar)

The sustainability level is a rating produced by Morningstar that aims to independently measure the level of responsibility of a fund based on the values in the portfolio. The rating ranges from very low (1 Globe) to very high (5 Globes).
