Lower Risk — Higher Risk

⚠ The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years.
The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

MANAGER'S COMMENT

Significant decline in gold prices of ~6% ($) in September, while a notable increase in US 10-year real interest rates of almost 50bps and a 2% appreciation of the US dollar against major currencies was observed.

Nevertheless, investor interest in gold remains strong, with ETC holdings backed by physical gold rising by 63 tonnes in September, for a total of 3,140 tonnes, the highest level since August 2022.

Gold mining companies suffered in this environment, amplifying the drop in gold prices with a decline of almost 11% ($). The average gold prices expected by consensus for the whole of 2026 have been negatively adjusted to $4,500/oz, leading to a downward revision of expected 12-month profits by 2.5%, though they remain up by ~13.5% since the start of the year.

In this context, the fund's performance recorded a sharp decline in September, but less than that of its benchmark index. The best contributors to performance were the intermediate companies DPM Metals, whose drilling results in Serbia and Bulgaria are very promising, and Endeavour Mining; the developers Montage Gold, whose Kone mine in Côte d'Ivoire is entering production, and Founders Metals, as Gold Fields now holds 19.9% of the capital; the silver producer Aya Gold & Silver with the release of the Boumadine PEA in Morocco; and the junior Wesdome Gold Mines. Conversely, the main detractors were the developer Novagold Resources, impacted by the drop in gold prices, and the underexposure to Newmont Corp, which proved more defensive during the market downturn.

Regarding portfolio management, a new stock was added to the portfolio: Eldorado Gold, whose Skouries project in Greece is entering production. Furthermore, the main increases concerned Or Royalties, whose valuation remains very attractive, and Northern Star Resources, which is attracting interest from Gold Fields. Conversely, one stock exited the portfolio: Westgold Resources in Australia, due to the absence of catalysts. Additionally, the main reductions concerned the senior companies Barrick Mining and Newmont Corp, the streaming company Wheaton Precious Metals, and the intermediate companies Endeavour Mining and Alamos Gold.

AVERAGE ESG RATING (source : Amundi)

Environmental, Social and Governance rating. Information on sustainability-related aspects can be found at https://about.amundi.com/legal-documentation

ESG Investment Universe: NYSE Arca Gold Miners

Investment Portfolio Score: 0.55

ESG Investment Universe Score[1]: 0.44

ESG Coverage (source: Amundi) *

	Portfolio	ESG Investment Universe
Percentage with an Amundi ESG rating [2]	90.59%	96.79%
Percentage that can have an ESG rating [3]	99.45%	99.09%

* Securities that can be rated on ESG criteria. The total may be different from 100% to reflect the real exposure of the portfolio (cash included).

ESG Terminology

ESG criteria

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:
"E" for Environment (energy and gas consumption levels, water and waste management, etc.).
"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).
"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.)

ESG Rating

The issuer's ESG rating: each issuer is assessed on the basis of ESG criteria and obtains a quantitative score, the scale of which is based on the sector average. The score is translated into a rating on a scale from A (highest rating) to G (lowest rating). The Amundi methodology provides for a comprehensive, standardised and systematic analysis of issuers across all investment regions and asset classes (equities, bonds, etc.).
ESG rating of the investment universe and the portfolio: the portfolio and the investment universe are given an ESG score and an ESG rating (from A to G). The ESG score corresponds to the weighted average of the issuers' scores, calculated according to their relative weighting in the investment universe or in the portfolio, excluding liquid assets and non-rated issuers.

Amundi ESG Mainstreaming

In addition to complying with Amundi Responsible Investment Policy[4], Amundi ESG Mainstreaming portfolios have an ESG performance objective that aims to achieve a portfolio ESG score above the ESG score of their ESG Investment universe.

[1] The investment universe reference is defined by either the fund's reference indicator or an index representative of the ESG-related investable universe.
[2] Percentage of securities with an Amundi ESG rating out of the total portfolio (measured in weight) that can be related.
[3] Percentage of securities for which an ESG rating methodology is applicable out of total portfolio (measured in weight).
[4] The updated document is available at https://www.amundi.com/int/ESG.

Sustainability Level (source : Morningstar)

The sustainability level is a rating produced by Morningstar that aims to independently measure the level of responsibility of a fund based on the values in the portfolio. The rating ranges from very low (1 Globe) to very high (5 Globes).
