INVESTMENT STRATEGY *(Source: Amundi Group)*

The Fund's objective is to achieve a positive return in all types of market conditions over a medium-term period (minimum of two years) through a discretionary and flexible management approach by exposing to various international bond, money market and equity markets. The allocation is based on the team's projections on the various markets and according to the level of risk presented by each asset class. To achieve this, the allocation is mainly made through an active selection of UCIs, and/or securities (bonds, money-market instruments, and equities). Investment vehicles incorporating an Environmental, Social and Governance (E, S, and G - or, when taken together, ESG) approach will be preferred and will always represent a majority of the Fund.

MANAGER'S COMMENT

The month of October 2026 was marked by a new surge in energy prices. Indeed, attacks on ships continued in the Strait of Hormuz, the Houthis claimed responsibility for strikes against several Saudi refineries, and Donald Trump hinted that US strikes on Iran could resume after the midterm elections on November 3. As a result, the price of Brent crude rose by nearly 14% over the month, reaching $118, its highest level in six months. The price of natural gas also increased sharply, reaching its highest level since the end of 2022. Another key event of the month was the sharp decline in technology stocks at the very end of the month, following disappointing earnings reports from Alphabet, Amazon, and Intel, which reignited doubts about the profitability of massive investments in AI.
Inflation indices published in October, covering the month of September, accelerated again due to energy prices. In the eurozone, headline inflation reached 3.8% compared to 3.2% in August, its highest level since September 2023, with the energy component rising by 18.8% year-on-year. In contrast, core inflation remained broadly stable at 2.5%. In the United States, headline inflation (CPI) rose from 3.4% to 3.7%, while core inflation climbed to 2.6%, slightly more than expected. The September “core PCE” inflation came in at 3.1%.
Activity indicators continued to be robust. In the United States, Q3 GDP growth came in at 3.4% quarter-on-quarter annualized, above expectations, driven by consumer spending and business investment. However, after a strong report in August, the September employment report disappointed, with only 29,000 non-farm jobs created and an increase in the unemployment rate to 4.2%. In the eurozone, GDP grew by 0.4% in Q3, despite a surprise 0.1% contraction in France, but the composite PMI fell to 51.9 in October from 53.1 in September, well below expectations. In China, GDP growth came in at 4.5% year-on-year in Q3, but the economy remains highly unbalanced and household consumption very weak.
After September, the first month in history during which the ECB, the Fed, and the BoJ all raised their key rates, these three central banks all decided to leave their rates unchanged in October. The Fed maintained the fed funds target range at 3.75/4%, but two FOMC members (Lisa Cook and Beth Hammack) voted in favor of another hike. Kevin Warsh indicated that the September rate hike had begun to take effect and that the tightening of financial conditions was paving the way for a period of more sustainable growth and price stability. For its part, the BoJ left its main policy rate at 1.25% but opened the door to a hike in December. Finally, the ECB left its deposit rate at 2.50%, even though energy prices in Europe are now between the “adverse” and “severe” scenarios mentioned in September, fueling upside risks for inflation and downside risks for growth. The Council debated a new rate hike but judged that uncertainties were still too high, while indicating that “the direction is quite clear” for all its members. For now, it does not see a substantial risk of second-round effects.
Despite the rise in oil prices, bond yields fell sharply over the month, benefiting from a flight to safe-haven assets at the end of the month and the central banks’ pause. The US 10-year yield fell by nearly 40 bps to 4.90%, after briefly exceeding 5.30% during the month. The German 10-year yield fell by about 25 bps over the month to 3.29%, returning to its end-August levels. In Japan, the 10-year yield fell back below the 3% mark, to 2.77%, its lowest level in nearly three months. Finally, gold fell again, by about 6% over the month, to just over $3,875 an ounce, penalized by the prospect of further Fed rate hikes.
Equity markets were shaken at the end of the month by doubts about the profitability of AI-related investments. The S&P 500 fell by 0.9% over the month and the Nasdaq by more than 5%, while the Dow Jones rose by 1.7%. The Eurostoxx 600 was more resilient, with an increase of 1.9%. Asian markets, more exposed to the semiconductor sector, fell sharply: the Nikkei lost nearly 5.2% and the MSCI Emerging dropped 8.1%, its worst month since the start of the war in Iran.

On the thematic side, after several months dominated by large technology stocks and artificial intelligence, investors began to favor defensive sectors, undervalued stocks, and quality assets. The correction in AI-related stocks does not necessarily signal the end of the technology cycle, but rather reflects a heightened demand for profitability and financial discipline.
Investors are now questioning: the very high level of investment in AI infrastructure, the ability of hyperscalers to turn these investments into cash flow, the future profitability of data centers, and the debt levels of certain cloud specialists. The question is no longer just who will benefit from AI, but above all who will be able to sustainably capture its economic value.
October 2026 confirmed the role of the healthcare sector as a safe haven, and AI-driven drug discovery is emerging as a new strong thematic focus. The main challenge for investors lies in balancing the undeniable acceleration of drug discovery by AI and its still uncertain impact on clinical success—a distinction that is increasingly influencing stock selection within this sector.
Around consumer themes, quarterly reports showed that the preference for experiences over goods has intensified, with high-end travel and beauty remaining strong segments, while non-essential retail—particularly in China and among low-income households globally—faced significant challenges. This K-shaped dynamic is the guiding thread for consumer brand positioning, favoring premium, good value-for-money, and experience-focused brands over mid-range and luxury brands.
In October, CPR Smart Trends was down 0.18%. Equity exposure was reduced over the month from 18.5% to 13.5%. In terms of equity bets, we significantly reduced our exposure to the AI theme and increased our position in Healthcare. For the rates segment, following the “flight to quality” observed during the month, we increased our rate sensitivity by 40bps to 3.65.

AVERAGE ESG RATING (source : Amundi)

Environmental, Social and Governance rating. Information on sustainability-related aspects can be found at https://about.amundi.com/legal-documentation

ESG Investment Universe: 60% BLOOMBERG GLOBAL AGGREGATE + 20% ICE BOFA GLOBAL HIGH YIELD INDEX + 20% MSCI ACWI IMI

Investment Portfolio Score: 0.81

ESG Investment Universe Score[1]: 0.28

ESG Coverage (source: Amundi) *

	Portfolio	ESG Investment Universe
Percentage with an Amundi ESG rating [2]	100.00%	95.62%
Percentage that can have an ESG rating [3]	91.22%	93.58%

* Securities that can be rated on ESG criteria. The total may be different from 100% to reflect the real exposure of the portfolio (cash included).

ESG Terminology

ESG criteria

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:
"E" for Environment (energy and gas consumption levels, water and waste management, etc.).
"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).
"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.)

ESG Rating

The issuer's ESG rating: each issuer is assessed on the basis of ESG criteria and obtains a quantitative score, the scale of which is based on the sector average. The score is translated into a rating on a scale from A (highest rating) to G (lowest rating). The Amundi methodology provides for a comprehensive, standardised and systematic analysis of issuers across all investment regions and asset classes (equities, bonds, etc.).
ESG rating of the investment universe and the portfolio: the portfolio and the investment universe are given an ESG score and an ESG rating (from A to G). The ESG score corresponds to the weighted average of the issuers' scores, calculated according to their relative weighting in the investment universe or in the portfolio, excluding liquid assets and non-rated issuers.

Amundi ESG Mainstreaming

In addition to complying with Amundi Responsible Investment Policy[4], Amundi ESG Mainstreaming portfolios have an ESG performance objective that aims to achieve a portfolio ESG score above the ESG score of their ESG Investment universe.

[1] The investment universe reference is defined by either the fund's reference indicator or an index representative of the ESG-related investable universe.
[2] Percentage of securities with an Amundi ESG rating out of the total portfolio (measured in weight) that can be related.
[3] Percentage of securities for which an ESG rating methodology is applicable out of total portfolio (measured in weight).
[4] The updated document is available at https://www.amundi.com/int/ESG.

Sustainability Level (source : Morningstar)

The sustainability level is a rating produced by Morningstar that aims to independently measure the level of responsibility of a fund based on the values in the portfolio. The rating ranges from very low (1 Globe) to very high (5 Globes).
