Risk Indicator (Source : Fund Admin)

Lower Risk

Higher Risk

The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

INVESTMENT STRATEGY (Source: Amundi Group)

The fund's objective is to outperform global equity markets over a long-term period (minimum of five years) by investing in international equities which contribute to social progress and to the reduction of inequalities around the world. The investment process integrates a sustainable approach. In order to define the universe, the Management Company assesses each company on different aspects such as tax policy, wage policy, health & well-being, education, diversity, ethic, ...

**Alexandre Blein**

Portfolio Manager

MANAGER'S COMMENT

In July, global equity markets moved in a more volatile environment, marked by escalating tensions between the United States and Iran, with second-round effects on energy prices, inflation expectations, and market sentiment. The Fed's new communication policy, namely its decision to no longer provide forward guidance, also slightly fueled volatility. At the same time, the AI theme underwent a significant adjustment, as valuation levels and positioning reached extreme levels. Even minor negative news, with low impact, triggered profit-taking. The market was particularly concerned to see Alphabet's free cash-flow generation turn negative; this news was interpreted as a precursor to a peak in its investments in AI infrastructure. The emergence of a Chinese equipment manufacturer capable of producing DUV semiconductor manufacturing machines also fueled concerns about upcoming semiconductor overproduction. These factors drove a rotation from momentum positions and AI-related stocks to value and defensive sectors for most of the month, until the publication of Microsoft and Amazon's results on Thursday, August 30. These releases, which reported not only good profitability from AI infrastructure spending but also strong future demand, marked a true inflection point for the technology sector: initially, the beneficiaries of this spending, notably semiconductors, rebounded sharply; subsequently, cloud providers began to outperform and catch up on their year-to-date lag. Furthermore, the publication of half-year results proved extremely solid (with upward revisions to expected results) and resilient to disruptions related to the Middle East conflict and inflationary pressures. Nevertheless, over the month, the AI theme underperformed via semiconductors and electrification companies, while energy (rising oil prices amid renewed tensions between the US and Iran) and financials (favorable market and economic environment, rising long-term rates) outperformed.

Over the period, the fund declined by 2.3%, underperforming its index by 1.7%. The fund's relative performance was penalized both by its absence from the energy sector (to the tune of 40 basis points) and by its overexposure to beneficiaries of AI data center construction spending, via the semiconductor segment. Although we took profits and neutralized our exposure to the memory segment, the fund remained slightly overweight in analog chips and semiconductor equipment manufacturers. Above all, we maintained our overexposure to TSMC. Ultimately, our exposure to semiconductors cost us about 90 basis points. We also suffered from the absence of Amazon in the universe and in the fund, to the tune of about twenty basis points. Stock selection in healthcare, with AstraZeneca disappointing on a product development program, also penalized us by about ten basis points. Conversely, we benefited from good stock selection in the industrial goods sector, with strong results from Schneider, Hitachi, Airbus, and Saint-Gobain. Our overweight in Microsoft also brought us more than 40 basis points, following the publication of results showing an acceleration in Azure and their AI Copilot offering, as well as good profitability from their AI investments. During the month, we took advantage of the decline in semiconductors to buy and avoid diluting our position. We also increased our exposure to the MedTech sector, as this segment seemed undervalued given its growth and profitability prospects.

More constructive discussions between Iran and the United States, macroeconomic indicators that remain solid, earnings releases above expectations accompanied by more favorable outlooks, and the reassuring statements from Microsoft and Amazon regarding the profitability of their AI investments, all argue in favor of a market rebound driven by cyclical sectors. We thus increased the portfolio's equity exposure from about 96% of assets to 99.5% while maintaining our cyclical bias.

In the long term, the adoption of artificial intelligence risks causing job destruction, widening inequalities, and weakening the majority in favor of a minority. In this context, companies with good social practices are essential to support this transition. They promote professional retraining, preserve dignity at work, and contribute to a more equitable distribution of benefits. More than ever, these responsible companies are key to ensuring AI adoption benefits everyone, reconciling technological progress and social justice.

AVERAGE ESG RATING (source : Amundi)

Environmental, social and governance rating

ESG Investment Universe: 100% MSCI ACWI

Investment Portfolio Score: 0.66

ESG Investment Universe Score¹: -0.10**ESG Coverage (source: Amundi) ***

	Portfolio	ESG Investment Universe
Percentage with an Amundi ESG rating ²	100.00%	99.86%
Percentage that can have an ESG rating ³	98.59%	100.00%

* Securities that can be rated on ESG criteria. The total may be different from 100% to reflect the real exposure of the portfolio (cash included).

ESG Terminology**ESG criteria**

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:

"E" for Environment (energy and gas consumption levels, water and waste management, etc.).

"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).

"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.)

ESG Rating

The issuer's ESG rating: each issuer is assessed on the basis of ESG criteria and obtains a quantitative score, the scale of which is based on the sector average. The score is translated into a rating on a scale from A (highest rating) to G (lowest rating). The Amundi methodology provides for a comprehensive, standardised and systematic analysis of issuers across all investment regions and asset classes (equities, bonds, etc.).

ESG rating of the investment universe and the portfolio: the portfolio and the investment universe are given an ESG score and an ESG rating (from A to G). The ESG score corresponds to the weighted average of the issuers' scores, calculated according to their relative weighting in the investment universe or in the portfolio, excluding liquid assets and non-rated issuers.

Amundi ESG Mainstreaming

In addition to complying with Amundi Responsible Investment Policy⁴, Amundi ESG Mainstreaming portfolios have an ESG performance objective that aims to achieve a portfolio ESG score above the ESG score of their ESG Investment universe.

¹ The investment universe reference is defined by either the fund's reference indicator or an index representative of the ESG-related investable universe.

² Percentage of securities with an Amundi ESG rating out of the total portfolio (measured in weight) that can be related.

³ Percentage of securities for which an ESG rating methodology is applicable out of total portfolio (measured in weight).

⁴ The updated document is available at <https://www.amundi.com/int/ESG>.

Sustainability Level (source : Morningstar)

The sustainability level is a rating produced by Morningstar that aims to independently measure the level of responsibility of a fund based on the values in the portfolio. The rating ranges from very low (1 Globe) to very high (5 Globes).

SRI Terminology

Socially Responsible Investment (SRI)

The SRI expresses sustainable development objectives in investment decisions by adding Environmental, Social and Governance (ESG) criteria in addition to the traditional financial criteria.

SRI thus aims to balance economic performance and social and environmental impact by financing companies and public entities which contribute to sustainable development whatever their business sector. By influencing the governance and behaviour of stakeholders, SRI promotes a responsible economy.

ESG criteria

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:

"E" for Environment (energy and gas consumption levels, water and waste management, etc.).

"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).

"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.).

¹ Outstanding securities in terms of ESG criteria excluding cash assets.

The decision of the investor to invest in the promoted fund should take into account all the characteristics or objectives of the fund.

Focus on Environmental, Social and Governance key performance indicators

In addition to the overall ESG assessment of the portfolio and the E, S and G dimensions, the manager uses impact indicators to assess the ESG quality of his portfolio. Four representative indicators of Environment, Social, Human Rights and Governance have been identified. The manager's minimum objective is to deliver a quality score higher than that of the index on at least two of the indicators.

RESPECT FOR HUMAN RIGHTS: decent work and freedom of association

Coverage rate (Portfolio/Benchmark) 98.78% 99.56%

Sources and definitions

Carbon Intensity: PAI 3 measures carbon emissions expressed in million euros (€ million) of revenue. The Greenhouse Gas intensity of the relevant portfolio is determined by calculating the portfolio weighted average of the total greenhouse gas emissions intensity per million euros of sales of the companies in the portfolio (t/EUR million sales).

Amundi relies on the data provider S&P-Trucost, whose methodology is based on the Greenhouse Gas Protocol:

Scope 1: Direct emissions generated by resources owned or controlled by the company.

Scope 2: Indirect emissions generated by the purchase or production of electricity, steam, or heat.

Scope 3: All other indirect emissions, both upstream and downstream of the value chain. For data robustness reasons, we have chosen to use emissions from upstream Scope 3 activities.

Investments in companies that have not taken initiatives to reduce their carbon emissions: The extent of investments in companies without carbon emissions reduction initiatives in the relevant portfolio is assessed by calculating the sum of the weights of these companies in the relevant portfolio that don't have submitted Science-Based Target (SBT) or CDP target. The PAI indicator uses the "relevant" approach, meaning that the denominator is determined by considering the relevant portfolio. The weights of the portfolio are adjusted to account for incomplete data coverage.

Independent board members: Board independence. average percentage of independent directors on the Board of Directors. Data provider: Refinitiv

Human rights policy: Board independence. average percentage of independent directors on the Board of Directors. Data provider: Refinitiv

Sources, definitions and methodological notes

1. Data for these indicators are provided by Reuters. They are shown as an average based on data available from the portfolio and the index.

2. CPR AM Research. For companies in the United States, the United Kingdom and Germany, data are taken from official publications, namely the SEC, the IMU and the HPC. Data for other countries are collected from brokers.

3. Carbon data are provided by Trucost. They correspond to companies' annual emissions and are shown in tonnes of CO2 equivalent, i.e. they include the six greenhouse gases listed in the Kyoto protocol, for which emission volumes are multiplied by their global warming potential (GWP) to calculate the CO2 equivalent.

Carbon footprint per euro million of sales³

Total carbon portfolio footprint (Portfolio/Index) : 118.26 / 153.02

This indicator measures the average emissions in metric tonnes of carbon equivalent per unit of a company's revenue (€ million of sales). This is an indicator of the carbon intensity of the value chain of the companies in the portfolio.
