INVESTMENT STRATEGY (Source: Amundi Group)

The investment objective is to outperform global equity markets over a long-term period (minimum of five years) by investing in international equities committed to limiting impact of climate change, while integrating Environmental, Social and Governance (E, S, and G – or, when taken together, ESG) criteria in the investment process.

Portfolio Manager

**Yasmine De Bray**

Portfolio Manager

MANAGER'S COMMENT

In July, global equity markets moved in a more volatile environment, marked by escalating tensions between the United States and Iran, with second-round effects on energy prices, inflation expectations, and market sentiment. The Fed's new communication policy, namely its willingness to no longer provide forward guidance, also slightly fueled volatility. At the same time, the AI theme underwent a significant adjustment, as valuation levels and positioning reached extreme levels. Even the slightest negative news, even with low impact, led to profit-taking. The market was particularly concerned to see Alphabet's free cash flow generation turn negative; this news was interpreted as an early sign of a peak in its AI infrastructure investments. The emergence of a Chinese equipment manufacturer capable of producing DUV semiconductor manufacturing machines also fueled concerns about upcoming semiconductor overproduction. These factors drove a rotation from momentum and AI-related stocks to value and defensive sectors for most of the month, until the release of Microsoft and Amazon's results on Thursday, August 30. These reports, which showed not only good profitability from AI infrastructure spending but also continued strong demand, marked a real turning point for the technology sector: initially, the beneficiaries of this spending, particularly semiconductors, rebounded sharply; subsequently, cloud providers began to outperform and catch up their year-to-date underperformance. Furthermore, half-year earnings releases proved extremely strong (with upward revisions to expected results) and resilient in the face of disruptions related to the Middle East conflict and inflationary pressures. Nevertheless, over the month, the AI theme underperformed through semiconductors and electrification companies, while energy (rising oil prices amid renewed tensions between the US and Iran) and financials (favorable market and economic environment, rising long-term rates) outperformed.

Over the period, the fund declined by 1.6%, underperforming its benchmark by 1%. The fund's relative performance was penalized both by its absence from the energy sector (costing 40 basis points) and by its overweight in beneficiaries of AI data center construction spending, via the semiconductor segment. Within semiconductors, our positions in TSMC and KLA weighed on performance, while we benefited from our underweight in the memory segment and the strong resilience of Broadcom and Nvidia. In the end, our exposure to semiconductors cost us about 30 basis points. We also suffered from the absence of Amazon, costing around 20 basis points. Stock selection in healthcare, with AstraZeneca disappointing on a product development program, also penalized us by about 10 basis points. On the other hand, we benefited from the rebound of Deutsche Telekom, supported by the strong operational momentum of its US subsidiary T-Mobile and the dissipation of concerns related to a potential merger with the latter. We also benefited from good stock selection in the capital goods sector, with strong results from Schneider, Hitachi, and Saint-Gobain. Our overweight in Microsoft also brought us more than 40 basis points, thanks to a strong earnings release showing an acceleration in Azure and their AI Copilot offering, as well as reassuring commentary on the profitability of their AI investments. Over the month, we took advantage of the decline in semiconductors to buy back marginally, in order to limit the dilution of our exposure to this segment caused by falling prices. In particular, we initiated two new positions in semiconductor equipment manufacturers, with ASML and Kioxia. We also increased our exposure to financials (Société Générale, Mizuho Financial Group, and S&P Global), to staples (Danone) and discretionary consumption (Ford), and we initiated a new position in medtech with Intuitive Surgical. We also took some profits on Apple, following the stock's rebound as part of the rotation out of memory chips.

More constructive discussions between Iran and the United States, macroeconomic indicators that remain solid, earnings releases above expectations accompanied by more favorable outlooks, and the reassuring commentary from Microsoft and Amazon on the profitability of their AI investments, all argue in favor of a market rebound driven by cyclical sectors. We are thus maintaining the portfolio's cyclical bias.

AVERAGE ESG RATING (source : Amundi)

Environmental, social and governance rating

ESG Investment Universe: 100% MSCI ACWI

Investment Portfolio Score: 0.50

ESG Investment Universe Score¹: -0.10**ESG Terminology****ESG criteria**

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:

"E" for Environment (energy and gas consumption levels, water and waste management, etc.).

"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).

"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.)

ESG Rating

The issuer's ESG rating: each issuer is assessed on the basis of ESG criteria and obtains a quantitative score, the scale of which is based on the sector average. The score is translated into a rating on a scale from A (highest rating) to G (lowest rating). The Amundi methodology provides for a comprehensive, standardised and systematic analysis of issuers across all investment regions and asset classes (equities, bonds, etc.).

ESG rating of the investment universe and the portfolio: the portfolio and the investment universe are given an ESG score and an ESG rating (from A to G). The ESG score corresponds to the weighted average of the issuers' scores, calculated according to their relative weighting in the investment universe or in the portfolio, excluding liquid assets and non-rated issuers.

Amundi ESG Mainstreaming

In addition to complying with Amundi Responsible Investment Policy⁴, Amundi ESG Mainstreaming portfolios have an ESG performance objective that aims to achieve a portfolio ESG score above the ESG score of their ESG Investment universe.

ESG Coverage (source: Amundi) *

	Portfolio	ESG Investment Universe
Percentage with an Amundi ESG rating ²	100.00%	99.86%
Percentage that can have an ESG rating ³	99.22%	100.00%

* Securities that can be rated on ESG criteria. The total may be different from 100% to reflect the real exposure of the portfolio (cash included).

¹ The investment universe reference is defined by either the fund's reference indicator or an index representative of the ESG-related investable universe.

² Percentage of securities with an Amundi ESG rating out of the total portfolio (measured in weight) that can be related.

³ Percentage of securities for which an ESG rating methodology is applicable out of total portfolio (measured in weight).

SRI Terminology

Socially Responsible Investment (SRI)

The SRI expresses sustainable development objectives in investment decisions by adding Environmental, Social and Governance (ESG) criteria in addition to the traditional financial criteria.

SRI thus aims to balance economic performance and social and environmental impact by financing companies and public entities which contribute to sustainable development whatever their business sector. By influencing the governance and behaviour of stakeholders, SRI promotes a responsible economy.

ESG criteria

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:

"E" for Environment (energy and gas consumption levels, water and waste management, etc.).

"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).

"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.).

¹ Outstanding securities in terms of ESG criteria excluding cash assets.

The decision of the investor to invest in the promoted fund should take into account all the characteristics or objectives of the fund.

Focus on Environmental, Social and Governance key performance indicators

In addition to the overall ESG assessment of the portfolio and the E, S and G dimensions, the manager uses impact indicators to assess the ESG quality of his portfolio. Four representative indicators of Environment, Social, Human Rights and Governance have been identified. The manager's minimum objective is to deliver a quality score higher than that of the index on at least two of the indicators.

RESPECT FOR HUMAN RIGHTS: decent work and freedom of association

Coverage rate (Portfolio/Benchmark) 97.91% 99.56%

Sources and definitions

Carbon Intensity:PAI 3 measures carbon emissions expressed in million euros (€ million) of revenue. The Greenhouse Gas intensity of the relevant portfolio is determined by calculating the portfolio weighted average of the total greenhouse gas emissions intensity per million euros of sales of the companies in the portfolio (t/EUR million sales).

Amundi relies on the data provider S&P-Trucost, whose methodology is based on the Greenhouse Gas Protocol:

Scope 1: Direct emissions generated by resources owned or controlled by the company.

Scope 2: Indirect emissions generated by the purchase or production of electricity, steam, or heat.

Scope 3: All other indirect emissions, both upstream and downstream of the value chain. For data robustness reasons, we have chosen to use emissions from upstream Scope 3 activities.

Investments in companies that have not taken initiatives to reduce their carbon emissions:The extent of investments in companies without carbon emissions reduction initiatives in the relevant portfolio is assessed by calculating the sum of the weights of these companies in the relevant portfolio that don't have submitted Science-Based Target (SBT) or CDP target. The PAI indicator uses the "relevant" approach, meaning that the denominator is determined by considering the relevant portfolio. The weights of the portfolio are adjusted to account for incomplete data coverage.

Independent board members:Board independence. average percentage of independent directors on the Board of Directors. Data provider: Refinitiv

Human rights policy:Board independence. average percentage of independent directors on the Board of Directors. Data provider: Refinitiv

Portfolio's carbon footprint

Carbon footprint: carbon emissions per euro million invested

Carbon intensity : carbon emissions per euro million of sales

Total carbon footprint (Portfolio/Benchmark) : 40.47 / 68.43

This indicator measures the portfolio's carbon emissions in metric tonnes of carbon equivalent (tCO₂e) per euro million invested. This is an indicator of the emissions generated by investment in this portfolio.

* first-tier suppliers only

Total carbon intensity (Portfolio/Index) : 116.57 / 153.02

This indicator measures the average emissions in metric tonnes of carbon equivalent per company's revenue. This is an indicator of the carbon intensity of the value chain of the companies in the portfolio..

Sectoral contribution to carbon emission

This chart compares the weight of each sector relative to its contribution to the portfolio's carbon emissions.

Geographical contribution to carbon emission

This chart compares the weight of each country relative to its contribution to the portfolio's carbon emissions.

Coverage of carbon analysis ¹

	Portfolio	Benchmark
% Rated / Total	98.64%	99.18%
Coverage rate	99.32%	99.18%

¹ This measurement corresponds to the portion of private issuers for which we have carbon data as a percentage of all private issuers.

Fund statistics

	Portfolio	Benchmark
Issuers number	171	2390

Sources and definitions

The carbon emissions data is supplied by Trucost. It corresponds to companies' annual emissions expressed in tCO₂e, which covers the six greenhouse gases defined in the Kyoto protocol whose emissions are converted into global warming potential (GWP) in CO₂ equivalent

Definition of scopes:

- **Scope 1** : all emissions that arise directly from sources that are owned or controlled by the company.
- **Scope 2** : all indirect emissions generated by the purchase or production of electricity, steam or heat.
- **Scope 3** : all other indirect emissions, upstream and downstream of the value chain. For reasons of data robustness, Amundi has chosen to use emissions from activities upstream of Scope 3
- Source: Trucost EEI-O model (input/output model extended to the Trucost environment).

Waste recycling ratio and water intensity: source Reuters

Coal exposure

Share of the reporting company's revenues that derives from the following subsectors: electricity generation from coal, extraction of bituminous coal, opencast mining of bituminous coal and lignite.

Coverage of carbone reserves

% CO2 reserves Rated / Total
% CO2 reserves Rated / Rateable

Portfolio	Benchmark
1.51%	2.91%
1.52%	2.91%

¹ This measurement corresponds to the portion of private issuers for which we have carbon reserve data as a percentage of all private issuers.

Green exposure in %

Share of the reporting company's revenues that derives from the development of "green technologies": renewable energies, biomass, energy efficiency, environmental services, water management, waste management.

Sources and definitions

All data concerning carbon emissions and coal are supplied by Trucost.
Green technology data is provided by different suppliers

Carbon reserves are expressed in potential carbon emissions calculated using the methodology of the Potsdam Institute for Climate Impact Research. The various fossil fuel reserves are converted into potential emissions based on the energy value and carbon content of the different reserves. This data concerns businesses that hold this type of reserves, belonging to the materials, energy and utilities sectors.
