Lower Risk — Higher Risk

⚠ The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years.
The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

INVESTMENT STRATEGY *(Source: Amundi Group)*

The Compartment's objective is to outperform global equity markets over a long-term period (minimum of five years) by investing in international equities which contribute to urbanisation and sustainable development of cities, while integrating Environmental, Social and Governance (E, S, and G - or, when taken together, ESG) criteria in the investment process.

MANAGER'S COMMENT

Equity markets remained broadly stable this month, but behind the scenes, we observed a strong sector rotation as well as a gradual questioning of the AI theme in an environment of persistently high rates, fueled by rising oil prices — the energy sector gained 14% over the month — and by increased sovereign risk, particularly in France. Consumer staples rose by 12% and healthcare by 11%, while the media sector (driven by Alphabet and Meta), as well as semiconductors, fell by 13%.
This correction was driven by growing skepticism regarding infrastructure-related capital expenditures, which are increasingly less self-financed and more dependent on financing markets that have become more demanding.
Furthermore, the latest earnings releases from hyperscalers reminded investors that, with the relative exception of Microsoft, cash flow generation is not always sufficient to absorb the intensity of capex. At the same time, capex continues to grow faster than revenues, reinforcing doubts about the sustainability of the cycle and the timing of a potential return on investment. The postponement of Anthropic's IPO further reduced visibility, highlighting the fact that monetizing investments in AI remains difficult to project in the short term.
This phase of uncertainty resulted in a marked rotation, with clear underperformance from the most obvious beneficiaries of the investment cycle, namely semiconductors, electrical stocks, and hyperscalers.
In addition, third-quarter earnings catalysts were less effective than expected, reinforcing the idea that visibility on the 2028 cycle remains insufficient. Strong fundamental results are no longer enough, on their own, to support prices if the macro news flow remains negative.
Over the month, the fund declined by 1.29%, compared to a 0.08% increase for the MSCI ACWI, representing an underperformance of 1.37%. The underperformance was mainly due to sector allocation, which weighed by 2.5%, partially offset by a good selection effect. The main drag on performance was our structural underweighting in the best-performing sectors such as healthcare (relative cost of 90 bps), consumer staples (-50 bps), and energy (-50 bps) in a context of rotation out of the AI theme towards defensive sectors. The fund is underweight in the AI infrastructure theme compared to the index, but this was offset by its overweight in Alphabet. The materials sector thus constituted the main performance driver, thanks in particular to the strong performance of stocks exposed to construction, such as CRH and Martin Marietta.
Given the lack of visibility, we plan to continue reducing exposure to the AI theme by favoring quality players, less dependent on external financing and able to monetize their installed base more quickly. In addition, we have taken some profits on our cybersecurity exposure, which has performed particularly well since the beginning of the year.

AVERAGE ESG RATING (source : Amundi)

Environmental, Social and Governance rating. Information on sustainability-related aspects can be found at https://about.amundi.com/legal-documentation

ESG Investment Universe: 100% MSCI ACWI

Investment Portfolio Score: 0.23

ESG Investment Universe Score[1]: -0.14

ESG Coverage (source: Amundi) *

	Portfolio	ESG Investment Universe
Percentage with an Amundi ESG rating [2]	100.00%	99.90%
Percentage that can have an ESG rating [3]	99.55%	100.00%

* Securities that can be rated on ESG criteria. The total may be different from 100% to reflect the real exposure of the portfolio (cash included).

ESG Terminology

ESG criteria

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:
"E" for Environment (energy and gas consumption levels, water and waste management, etc.).
"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).
"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.)

ESG Rating

The issuer's ESG rating: each issuer is assessed on the basis of ESG criteria and obtains a quantitative score, the scale of which is based on the sector average. The score is translated into a rating on a scale from A (highest rating) to G (lowest rating). The Amundi methodology provides for a comprehensive, standardised and systematic analysis of issuers across all investment regions and asset classes (equities, bonds, etc.).
ESG rating of the investment universe and the portfolio: the portfolio and the investment universe are given an ESG score and an ESG rating (from A to G). The ESG score corresponds to the weighted average of the issuers' scores, calculated according to their relative weighting in the investment universe or in the portfolio, excluding liquid assets and non-rated issuers.

Amundi ESG Mainstreaming

In addition to complying with Amundi Responsible Investment Policy[4], Amundi ESG Mainstreaming portfolios have an ESG performance objective that aims to achieve a portfolio ESG score above the ESG score of their ESG Investment universe.

[1] The investment universe reference is defined by either the fund's reference indicator or an index representative of the ESG-related investable universe.
[2] Percentage of securities with an Amundi ESG rating out of the total portfolio (measured in weight) that can be related.
[3] Percentage of securities for which an ESG rating methodology is applicable out of total portfolio (measured in weight).
[4] The updated document is available at https://www.amundi.com/int/ESG.

Sustainability Level (source : Morningstar)

The sustainability level is a rating produced by Morningstar that aims to independently measure the level of responsibility of a fund based on the values in the portfolio. The rating ranges from very low (1 Globe) to very high (5 Globes).
