Minimum recommended investment horizon : 6 months

Risk Indicator (Source : Fund Admin)

Lower Risk

Higher Risk

The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 6 months.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

TEAM MANAGEMENT

**Julien Levy**

Portfolio Manager

**Antoine Petit**

Co-Portfolio Manager

MANAGER'S COMMENT

August 2026 was marked by concerns over the evolution of long-term rates. The deadlock in negotiations between Iran and the United States, punctuated by sporadic attacks, led to oil prices remaining volatile throughout the month, with Brent crude ending at \$89 per barrel. The persistence of energy prices at high levels continued to fuel fears of accelerating inflation and thus weighed on bond markets. In response to this rise in long-term rates, U.S. Treasury Secretary Scott Bessent announced that Treasury purchases of long maturities would be at least doubled for the quarter. Inflation indices published in August, covering the month of July, delivered a mixed message. In the United States, headline inflation (CPI) slowed to 3.4% year-on-year, compared to 3.5% in June, while core inflation fell to 2.5%, its lowest level of the year. In the eurozone, by contrast, inflation accelerated to 2.9% in July, compared to 2.8% in June, driven higher by a renewed acceleration in the energy component (+10.3% year-on-year) linked to developments in oil and gas prices. Core inflation, meanwhile, came in at 2.5%. Activity surveys remained generally well oriented despite high energy prices. In the eurozone, the composite PMI rose for the third consecutive month, reaching 52.1 in August, its highest level since November, driven by German industry. In the United States, the ISM manufacturing index jumped to 55.6 in July, its highest level since May 2022, while the ISM services index held steady at 54.1. The July employment report, on the other hand, disappointed, with a loss of 23,000 non-farm jobs and significant downward revisions for previous months, even though the unemployment rate fell back to 4.1%, a thirteen-month low, due to a further decline in the participation rate.

None of the major central banks held a monetary policy committee meeting in August. The key event of the month from this perspective was the Jackson Hole symposium, where Kevin Warsh was reassuring about the labor market but concerned about the inflation trajectory. For the first time in his term, he provided guidance by saying that the Fed's attention should currently be focused primarily on price stability. In the eurozone, the ECB minutes suggested that a majority of Governing Council members would be ready to raise key rates in September to contain the effects of rising energy prices.

Bond yields generally increased over the month, particularly at the very end of the month after Kevin Warsh's speech. The U.S. 10-year yield ended the month at 4.74%, its highest level since the start of 2025. The German 10-year yield rose sharply, ending the month at 3.30%, its highest level since 2011, driven by expectations of ECB rate hikes. Sovereign spreads in the eurozone widened slightly.

Euro credit held up well over the month. In Investment Grade, spreads tightened by 1 bp to 76 bps, generating an outperformance of 7 bps versus sovereigns. However, the 12 bp rise in underlying yields to 3.8% led to a total return of -0.2%. The BBB segment and short maturities outperformed, while financials underperformed industrials (with Automotive and Telecoms leading). French banks also slightly underperformed in a context of widening OAT spreads. In High Yield, spreads tightened by 10 bps to 255 bps, an outperformance of 43 bps versus sovereigns and a total return of +0.4%. The BB and single-B segments outperformed CCCs. Finally, the primary market resumed in the third week, with a total of €40.8 billion in gross issuance, confirming the market's strong absorption capacity despite seasonally less favorable liquidity.

Summary of positions for the month:

- The share of cash, including money market UCITS, is at 10.48% of assets
- Credit sensitivity is down to 1.01
- We have a rate sensitivity of 0.70, down over the month
- The credit quality of the portfolio is solid with an average rating of A-
- The overall ESG score stands at C versus D for the benchmark index

²Outstanding securities in terms of ESG criteria excluding cash assets.**Definitions and sources****Responsible Investment (RI)**

The SRI expresses sustainable development objectives in investment decisions by adding Environmental, Social and Governance (ESG) criteria in addition to the traditional financial criteria.

SRI thus aims to balance economic performance and social and environmental impact by financing companies and public entities which contribute to sustainable development whatever their business sector. By influencing the governance and behaviour of stakeholders, SRI promotes a responsible economy.

ESG criteria

Extra-financial criteria are used to assess the Environmental, Social and Governance practices of companies, states or local authorities:

- o "E" for Environment: energy consumption and greenhouse gas emissions, water and waste management, etc.
- o "S" for Social/Society: human rights, health and safety, etc.
- o "G" for Governance: independence of board of directors, respect of shareholders' rights, etc.

Amundi Group' ratings range issuers from A to G, with A being the highest rating and G the lowest.

Focus on Environmental, Social and Governance key performance indicators

In addition to the overall ESG assessment of the portfolio and the E, S and G dimensions, the manager uses impact indicators to assess the ESG quality of his portfolio. Four representative indicators of Environment, Social, Human Rights and Governance have been identified. The manager's minimum objective is to deliver a quality score higher than that of the index on at least two of the indicators.

Environment¹

Total carbon portfolio footprint (Portfolio/Index) : 87.59 / 171.59

Carbon intensity : carbon emissions per euro million of sales

This indicator measures the average emissions in metric tonnes of carbon equivalent per unit of a company's revenue (€ million of sales). This is an indicator of the carbon intensity of the value chain of the companies in the portfolio.

Sources and definitions

1. Environmental indicator/Climate indicator: Carbon intensity (in metric tons of CO2 per million of revenue). This data is provided by Trucost. This corresponds to companies' annual greenhouse gas emissions expressed in metric tons of carbon dioxide equivalent. (CO2e). It covers the six greenhouse gases identified in the Kyoto Protocol with emissions converted into global warming potential (GWP) in CO2 equivalent.

Definition of scopes:

- Scope 1: All direct emissions from sources that are owned or controlled by a company.
- Scope 2: All indirect emissions arising from the purchase or production of electricity, steam or heat.
- Scope 3: All other indirect emissions, upstream and downstream of the value chain. For reasons of data robustness, Amundi has chosen to use emissions from activities upstream of Scope 3 - Source: Trucost EEI-O model (input/output model extended to the Trucost environment).

2. Management diversity. Average percentage of women managers. This indicator gives a more global measure of the advancement of women within the company than the data limited to the number of women Board members. Data provider: Refinitiv

3. Human Rights Compliance Indicator. percentage of companies with policies that exclude forced or obligatory child labor or that guarantee freedom of association and which are applied universally regardless of local laws. This indicator enables better assessment of fundamental human rights issues. Data provider: Refinitiv

4. Board independence. average percentage of independent directors on the Board of Directors. Data provider: Refinitiv

For these 4 indicators, the total for the portfolio/investment universe is equal to the companies' average for these indicators adjusted for their weight in the portfolio/investment universe.

Not all UCIs are systematically registered in the country of jurisdiction of all investors. Investing involves risk: past performance of UCIs is not a reliable indicator of future performance, and is not a guide to future performance. The value of UCI units or shares is subject to market fluctuations, so investments may fall as well as rise. As a result, UCI subscribers may lose all or part of their initial investment. It is the responsibility of all persons interested in UCIs to ensure that their subscription is compatible with the laws applicable to them and the tax consequences of such an investment, and to familiarize themselves with the regulatory documents in force for each UCI. Full prospectuses for UCIs governed by French law and approved by the Autorité des Marchés Financiers (AMF) are available free of charge on request from the management company's head office. With regard to management mandates, this document forms part of the statement of your portfolio management activities and should be read in conjunction with any other periodic statements or confirmation notices relating to your portfolio transactions provided by your account keeper. The source of the data in this document is the management company, unless otherwise stated. The date of the data in this document is that indicated at the head of the document, unless otherwise stated.

AVERAGE ESG RATING (source : Amundi)

Environmental, social and governance rating

ESG Investment Universe: 100% ICE BOFA 1-3 YEAR GLOBAL CORPORATE INDEX

Investment Portfolio Score: 1.20

ESG Investment Universe Score¹: 0.17**ESG Coverage (source: Amundi) ***

	Portfolio	ESG Investment Universe
Percentage with an Amundi ESG rating ²	100.00%	97.53%
Percentage that can have an ESG rating ³	98.73%	99.94%

* Securities that can be rated on ESG criteria. The total may be different from 100% to reflect the real exposure of the portfolio (cash included).

ESG Terminology**ESG criteria**

The criteria are extra-financial criteria used to assess the Environmental, Social and Governance practices of companies, states or local authorities:

"E" for Environment (energy and gas consumption levels, water and waste management, etc.).

"S" for Social/Society (respect for human rights, health and safety in the workplace, etc.).

"G" for Governance (independence of board of directors, respect for shareholders' rights, etc.)

ESG Rating

The issuer's ESG rating: each issuer is assessed on the basis of ESG criteria and obtains a quantitative score, the scale of which is based on the sector average. The score is translated into a rating on a scale from A (highest rating) to G (lowest rating). The Amundi methodology provides for a comprehensive, standardised and systematic analysis of issuers across all investment regions and asset classes (equities, bonds, etc.).

ESG rating of the investment universe and the portfolio: the portfolio and the investment universe are given an ESG score and an ESG rating (from A to G). The ESG score corresponds to the weighted average of the issuers' scores, calculated according to their relative weighting in the investment universe or in the portfolio, excluding liquid assets and non-rated issuers.

Amundi ESG Mainstreaming

In addition to complying with Amundi Responsible Investment Policy⁴, Amundi ESG Mainstreaming portfolios have an ESG performance objective that aims to achieve a portfolio ESG score above the ESG score of their ESG Investment universe.

¹ The investment universe reference is defined by either the fund's reference indicator or an index representative of the ESG-related investable universe.

² Percentage of securities with an Amundi ESG rating out of the total portfolio (measured in weight) that can be related.

³ Percentage of securities for which an ESG rating methodology is applicable out of total portfolio (measured in weight).

⁴ The updated document is available at <https://www.amundi.com/int/ESG>.

Sustainability Level (source : Morningstar)

The sustainability level is a rating produced by Morningstar that aims to independently measure the level of responsibility of a fund based on the values in the portfolio. The rating ranges from very low (1 Globe) to very high (5 Globes).
